

Metro Ticket Raising System – ServiceNow Project

Project Problem Statement

A metro rail organization receives thousands of passenger complaints every day through phone calls, emails, and service counters. These complaints include:

- Lost smart card
- Ticket machine not working
- Refund request
- Escalator/Lift issue
- Train delay
- Station cleanliness
- Security complaint

Currently, complaints are managed manually using spreadsheets and emails, causing:

- Delayed responses
- Duplicate complaints
- No tracking of ticket status
- Poor communication with passengers
- No SLA monitoring

Solution: Build a Metro Ticket Raising System in ServiceNow to automate complaint creation, assignment, tracking, and resolution.

Step-by-Step Implementation

Step 1: Create Application

Navigation:

All → System Applications → Studio → Create Application

Application Name:

Metro Ticket Raising System

Step 2: Create Metro Complaint Table

Navigation:

All → System Definition → Tables → New

Table Name:

Metro Complaint

Table Label:

Metro Complaint

Create fields:

Field Type

Ticket Number Auto Number Passenger Name String Mobile Number Phone Number Email Email Station Choice Complaint Type Choice Priority Choice Description String Status Choice Assigned To Reference(User) Resolution Notes String

Step 3: Create Choice Values

Navigation:

Metro Complaint Table → Complaint Type

Choices:

- Lost Card
- Refund
- Train Delay
- Escalator Issue
- Lift Issue
- Ticket Machine Issue
- Cleanliness

Security

Other

Status:

New

In Progress

On Hold

Resolved

Closed

Priority:

High

Medium

Low

Step 4: Create Module

Navigation:

All → System Definition → Modules → New

Module Name:

Raise Complaint

Table:

Metro Complaint

Step 5: Create Service Catalog Item

Passengers can raise complaints themselves.

Navigation

All → Service Catalog → Catalog Definitions → Maintain Items → New

Catalog Item

Metro Complaint

Variables:

Passenger Name

Mobile

Station

Complaint Type

Description

Submit creates a Metro Complaint record.

Step 6: Create Record Producer

Navigation

Service Catalog → Record Producers

Record Producer

Metro Complaint

Map variables to Metro Complaint table fields.

Step 7: Create Assignment Rule

Automatically assign tickets.

Navigation

All → System Policy → Assignment Rules

Example:

If
Complaint Type = Escalator
Assign to
Maintenance Team
If
Complaint Type = Security
Assign to
Security Team
If
Complaint Type = Refund
Assign to
Finance Team

Step 8: Create SLA

Example:
High Priority
Resolve within
4 Hours
Medium
8 Hours
Low
24 Hours

Navigation:
| Service Level Management → SLA Definitions → New

Step 9: Create Notification

Send Email when
Complaint Created
Assigned
Resolved
Closed

Navigation
| System Notification → Email → Notifications

Step 10: Create Business Rule

Navigation
| System Definition → Business Rules → New

Example
When Complaint Type = Security
Priority automatically becomes
High

Step 11: Create Flow Designer

Navigation
| Flow Designer → New Flow
Trigger
Record Created

- Actions
 - Assign ticket
 - Send Email
 - Create Task
 - Update Status
-

Step 12: Create Reports

Navigation

Reports → Create New

Reports:

- Complaints by Station
 - Complaints by Type
 - Closed Tickets
 - Open Tickets
 - High Priority Tickets
 - Monthly Complaints
-

Step 13: Create Dashboard

Navigation

Self-Service → Dashboards → New

Widgets:

- Total Complaints
 - Open Tickets
 - Closed Tickets
 - SLA Breached
 - Complaints by Station
 - Complaints by Category
-

End-to-End Workflow

1. Passenger opens the Service Catalog.
2. Selects Metro Complaint.
3. Fills complaint details.
4. ServiceNow creates a complaint record.
5. Assignment Rule assigns it to the correct team.
6. SLA starts automatically.
7. Notification is sent to the passenger.
8. Agent investigates and updates the ticket.
9. Business Rule adjusts priority if needed.
10. Agent resolves the complaint.
11. Passenger receives a resolution email.
12. Ticket is closed.
13. Reports and dashboards display complaint statistics.
